Todo validate IF the shunt + and - is opposite IRL
Prior measurements at some point made me remember this
might be wrong! OR my car has a fault

Shunt+ 200A/60mV
Shunt- connected to the battery negative terminal.
control (connected to the reversing gun), input
the motor controller input speed potentiometer
the motor controller input speed potentiometer
Coding PIN

GND, Battery monitoring system, star point for 72V
DC/DC converter ON/OFF + (anode), 5 V = ON
DC/DC converter ON/OFF - (cathode), 5 V = ON
K1 COM +72V, Forward/Backward Relay Input
K1 NO, Reverse exit
K1 NC, Forward Output

Stop signal input, drive = 12V, is switched on by the
Coding PIN
Ignition on, drive = 12V
Auto GND, tubular steel frame
12V Battery +
12V Battery -

Notice schottky drops roughly 0.25V

Todo consider skipping -12v for the display.

Todo decide if we can just use a simple charge pump
